CLASSIFICATION OF ARRHYTHMIA BY USING DEEP LEARNING WITH 2-D ECG SPECTRAL IMAGEREPRESENTATION

Date	13 November2022
Teamid	PNT2022TMID05778
ProjectName	Classification of arrhythmia by using deeplearning with2-d ecg spectral image representation

Project Flow

- User interacts with User interface to upload image
- Uploaded image is analyzed by the model which is integrated
- Once model analyses the uploaded image, the prediction is showcased on the UI
- To accomplish this, we have to complete all the activities and tasks listed below
-

Data Collection.

- Collect the dataset or Create the dataset Data Preprocessing.
- Import the ImageDataGenerator library
- Configure ImageDataGenerator class
- Apply ImageDataGenerator functionality to Trainset and Testset

Model Building

- Import the model building Libraries
- Initializing the model
- Adding Input Layer
- Adding Hidden Layer
- Adding Output Layer

- Configure the Learning Process
- Training and testing the model
- Optimize the Model
- Save the Model

Application Building

- Create an HTML file
- Build Python Code
