

Project Structure

By the end of this project we will:

- We will be able to learn how to get and prepare the dataset.
- We will be able to know how to do image processing.
- We will understand how CNN layers are work.
- Classify images using a Convolutional Neural Network.
- You will be able to know what are the activation functions can be used.
- You will be able to know how to read images using OpenCV.
- You will know convolutional Neural Networks for Computer vision AI Problems.
